eppendorf

Customizable Control

BioFlo® 510 benchtop SIP fermentation system

Convenience, Flexibility, and Control

The Eppendorf BioFlo® 510 fermentation system is designed for rapid delivery and easy field customization, should your requirements change. Compact, versatile, and exceptionally capable. Quality at a very competitive price.

Modular design provides system flexibility

- > Easily add or remove system components at any time, pre- or post-delivery to accommodate changes in your process requirements
- > Numerous ports in the vessel headplate and sidewall provide flexibility to position sensors, spray balls, addition valves, pressure transducer and more
- > Multiple gas flow options, up to two thermal mass flow controllers can be employed
- > Capable of batch, fed-batch and continuous modes
- > Three impeller options
- > Optional SCADA software, validation packages, sprayballs for vessel clean-in-place, redundant pH/DO sensors

Advanced controller optimizes results

> Simultaneously regulate up to 32 process loops through the sophisticated RPC (Reactor Process Controller) or Allen-Bradley® CompactLogix™ PLC (Programmable Logic Controller)

- > Front-accessed, analog inputs and outputs allow you to integrate up to 14 sensors, analyzers, flow controllers or other external devices
- > Security, built into the control system, offers two user groups unique userdefined passwords and auto log-out
- > Touchscreen control screens are exceptionally easy to navigate, to simplify setup, calibration, sterilization and monitoring
- > Store up to ten batch recipes; program and monitor sterilization cycles,gas flow, PI values, and more
- > This same RPC controller is used on our other benchtop fermentors, facilitating scale-up and scale-down

Production-scale system that fits on the bench

- > At just 116 cm wide x 86 cm deep (45.5 x 34.0 in), the compact BioFlo® 510 can fit on a lab bench. Or, move and operate it on our sturdy, optional, stainless-steel mobile table
- > Sterile vessel connections, flush with the vessel's interior, virtually eliminate deadlegs, minimizing contamination risk and simplifying cleaning
- > Fully validatable, following V-Model guides for URS, FRS, DDS, IQ, OQ and trace matrix
- > CE-certified and manufactured to meet cGMP guidelines

Enter and view sterilization parameters and valve sequences from the sterilization screen

Cascade one or more variables (in this case agitation and O₂) to achieve sophisticated process control, based on the value of any other one or more variables

Advanced system includes benchtop control station with touchscreen interface, stainless steel vessel, and piping skid

Customize PI values for all process parameters or select factory defaults

Multiple PG 13.5 and sanitary connection ports

provide flexibility to position sensors and redundant sensors to meet your process needs

Double mechanical seal with rushton-type impeller

Optional exhaust gas condenser reduces evaporation of vessel contents

Resterilizable sample valve

Adjustable-angle, user-friendly 15 in (38 cm) touchscreen interface simplifies control and provides clear viewing of process parameters

Multiple gas flow options: Choose 1 or 2 thermal mass flow controllers

Sanitary or quick connects

(TMFC) in a variety of flow

allow utilities to be connected in minutes

ranges

ASME and CE certified:

Designed and built to ASME and CE standards

4 removable vessels baffles provided for enhancing mixing

Resterilizable drain valve enables sterile transfer of vessel contents

Three built-in, assignable, peristaltic pumps

Safety features: A sanitary rupture disk in the vessel and an ASME safety release valve on the drain jacket are standard

Built-in load cell measures vessel volume, enabling weight to be used to automate pump control for additions and harvesting

Optional glycol heat exchanger enables rapid cool-down; closedloop, eco-friendly design reduces need for single-pass cooling water through the system

Resterilizable addition valve array: Each vessel can accommodate up to four addition ports for vessel additions (one addition port shown)

Optional impellers: Pitched blade impeller (left) for high aeration and low shear in insect and other cell cultures; marine blade impeller (right) for the growth of insect cells and other cultures
